Cancel claims 4-7, 9, 12-38, 40, and 41.

Replace claims 1, 2, 3, and 39 with the following:

1. An end face sensor device, comprising:

a linear body (2001), the linear body having a conductive polymer center electrode (2007) with an outer circumference of the center electrode coated with an insulating film made of polymer (2008) the linear body being flexible along a length of the linear body; and

a receiving part for receiving information from a subject and outputting the information as another information formed on an end face of the linear body, the receiving part being a light sensor coated with a transparent electrode (2006) extending along the length of the linear body, the transparent electrode defining a final exterior surface of the length of the linear body exposed to the atmosphere.

2. An end face sensor device as claimed in claim 1, wherein the light sensor comprises an active portion made of a conductive polymer.

3. An end face sensor device as claimed in claim 1, wherein, the light sensor is any of a photodiode, a phototransistor, a photo IC, a photo thyristor, a photoconductive element, a pyroelectric element, a color sensor, a solid-state image sensor, an element for position detection, and a solar battery.

Art Unit: 2856

39. An end face sensor device, comprising:

a linear body (2001), the linear body having a conductive polymer center electrode (2007) with an outer circumference of the center electrode coated with an insulating film made of polymer (2008); and

a receiving part for receiving information from a subject and outputting the information as another information formed on an end face of the linear body, wherein, the receiving part is a light sensor comprising an n-type semiconductor layer (2004) formed on the end face of the linear body, with a p-type semiconductor layer (2003) formed on the n-type semiconductor layer, the n-type and p-type layers together forming a pn junction of the light sensor receiving part; and

a transparent electrode (2006) coating the p-type semiconductor layer, the end face of the linear body, and the insulating film, the transparent electrode defining a final exterior surface of a full length of the linear body exposed to the atmosphere.
